

Can elevator cables be run through power cable trays

Overview

Cable Tray Installation Rules (NEC 392) – Electrical TraderHere's what you need to know: Cable Types: Only use conductors rated for open-air environments.

Key Takeaways

Elevator traveling cables should not be run through standard power cable trays due to their continuous motion and specialized support requirements. Elevator Cable Characteristics

Elevator traveling cables are flexible, multi-conductor cables designed to move continuously with the elevator car, often for tens of thousands of cycles over their lifespan. They carry both power and signal information and are engineered to withstand bending, tension, and torsion. Unlike stationary power cables, they require dedicated support systems that accommodate motion, prevent excessive bending, and avoid mechanical stress.

Cable Tray Limitations

Standard electrical cable trays are intended for fixed, stationary cables such as power, signal, and communication lines. They provide structural support, ventilation, and organization but do not accommodate continuous movement. Running a traveling cable through a tray could lead to:

- Premature wear or insulation damage due to friction and repeated flexing

- Increased risk of mechanical failure or electrical faults
 - Violation of electrical codes, as cable trays are not designed for moving conductors
- Code and Safety Considerations

The National Electrical Code (NEC) and industry standards specify that cable trays are for stationary electrical conductors only . Elevator cables must be supported by dedicated traveling cable systems, such as:

- Flexible steel strand supports
- Self-tightening devices
- Looping or roller systems that allow free movement without stress These systems ensure proper bend radius, reduce mechanical strain, and maintain long-term reliability.

Conclusion

Elevator traveling cables should not be installed in standard power cable trays. Instead, they require specialized support systems designed for motion. Using a cable tray for moving elevator cables can compromise safety, reduce cable lifespan, and violate electrical codes. For stationary power or signal wiring in the elevator machine room or hoistway, cable trays remain appropriate, but moving cables must always have dedicated supports .

Article Content

FactSheet

If visual observation reveals a cable tray that is completely full and/or over-flowing with cables, chances are that the cable tray is in

Cable Tray Fill Rules (NEC 392)

Fiber optic communication cables are immune to EMI and can be installed in power cable trays without separation

What is a Vertical Cable Tray?

A Vertical Cable Tray is a specialized support system designed to carry electrical and data cables securely in a

Cable Tray Questions | Cable Tray Institute

Question 8: Can high voltage cables be installed in cable trays? Answer: Yes — NEC permits type MC (Article 334) and type MV

B-Line series Cable Tray Design Considerations

The stresses of pulling large cables through cable trays can produce 3 times the stress of the cables' static load. If the installation

Document DICOS

Do not use a cable tray as a walkway, ladder, or support for people; a cable tray is a mechanical support system for cables and

Complete cable tray manual for electrical engineers and designers

The final drawings for a cable tray wiring system may be completed and sent out for bid or construction more quickly

Cable tray vs cable basket vs cable ladder vs cable trunking ...

This article will discuss the four most common types of cable containment and their uses: cable tray, cable basket,

Cable Tray Technical Guide A practical guide to product selection

SOLID-BOTTOM CABLE TRAY Providing additional cable protection, solid-bottom cable tray is sometimes preferred to support and

Cable Tray Installations Can Be Tricky: Definitions make the difference

Cable tray systems are permitted to have mechanically discontinuous segments between cable tray runs or between

FactSheet

Overloading cable trays can lead to a breakdown of the tray, its connecting points, and/or supports, causing hazards to persons

Types of Cable Typically Used in Cable Tray

Communication Cables – types CMP, CMR, CMG, CM, CMX Fire Alarm Cables – type NPLF – NPLFP, FPL-FPLP (CI) Type TC –

Installing Class 2 and power cables in cable trays.

A Class 2 cable assembly can run on a wall with no separation from a power cable in most cases; can this be done in a

Cable tray restrictions where power and data share a common tray

The owner has proposed disconnecting these power cables from the panelboard and the receptacles and abandoning

Cable Tray Questions | Cable Tray Institute

The number and type of conductors that can be installed in a cable tray is also limited by the weight of the cables and other load

B-Line series Cable Tray Design Considerations

A properly designed and installed cable tray system will provide outstanding reliability for a facility's control, communication, data,

Equipment Grounding Conductors for Cable Tray Systems

Equipment Grounding Conductors for Cable Tray Systems Cable tray wiring systems have excellent safety and dependability

Installation Of Cable In Cable Trays: NEC, Safety

Installation of Cable in Cable Trays involves precise routing on support systems, NEC/IEC compliance, grounding, ampacity derating,
