

Checking the optical module power of Huawei switches

Overview

Execute the command, display transceiver [interface interface-type interface-number | slot-id] [verbose] to check the optical module information on the device interface. During use, reading optical module information helps understand its real-time operating status, enabling faster troubleshooting of link abnormalities. The following uses the. Taking the Huawei 5700 series switches as an example, the commands to view optical module information are as follows: Transceiver Type :1000_BASE_SX_SFP Connector Type :LC Wavelength(nm) :850 Transfer Distance(m) :300(50um),150(62. Sample Output: (Can see link down and not receiving any power from the neighboring device) Or can do filtering:. Today, ETU-LINK will introduce how to query the information of optical module on Huawei switch. If not, replace it with a Huawei-certified optical module.
