

Data Center Rack Side Panel

Overview

Server rack side panels are essential components for maintaining a streamlined, organized, and professional server environment. Designed to fit a variety of rack configurations, these panels help create a clean appearance while supporting efficient airflow and equipment. The open sides of bayed enclosure systems and IT racks may be sealed with various types of side panels, offering either tool-free installation or a high protection category, depending on requirements. Our extensive selection includes vented, solid, and perforated doors, as well as side, rear, and top panels, designed to provide security, airflow optimization, and easy access to your equipment. Our louvered and mesh server cabinet doors maximize the volume of airflow without sacrificing security.
