ADW600: 1.

Key Takeaways

ADW series meters are modular energy monitoring devices designed for flexible installation in distribution boxes, offering multi-circuit metering, wireless communication, and space-saving integration. Overview

ADW series meters, such as the ADW300 and ADW600, are primarily used for three-phase active energy metering in low-voltage networks. They are designed to be installed inside distribution boxes, providing sub-item energy monitoring, operation supervision, and power management for different regions and loads . These meters are suitable for both residential and commercial applications where multiple circuits need monitoring.

Key Features

- **Modular Design:** The ADW600 integrates a smart gateway and multiple metering modules, allowing one gateway to manage up to 12 circuits, significantly reducing the number of meters and wiring complexity .

- **Space Efficiency:** By combining gateway and metering modules, the system can save over 80% of space compared to traditional multi-meter setups .
- **Communication Options:** ADW meters support RS485, WiFi, NB-IoT, 4G, and 470MHz wireless communication, enabling remote monitoring and data collection .
- **Comprehensive Metering:** They measure voltage, current, active/reactive/apparent power, power factor, frequency, voltage/current imbalance, and harmonic content. Some models also support digital input/output for remote control and alarms .
- **Flexible Installation:** DIN rail mounting allows easy integration into existing distribution boxes, and external CTs or PTs can be used for current measurement .
- **Additional Modules:** Optional modules include temperature measurement and residual current monitoring, enhancing safety and energy management .

Applications

- **Energy Management:** Monitor energy consumption per circuit for cost allocation or efficiency analysis.
- **Smart Buildings:** Integrate with building management systems for real-time monitoring and control.
- **Industrial and Commercial Facilities:** Track multiple circuits in a compact distribution box setup, reducing installation complexity.
- **Remote Monitoring:** Wireless communication allows operators to collect data without physical access to the distribution box.

Advantages

- Reduces the need for multiple meters and complex wiring.
 - Saves significant space in crowded distribution boxes.
 - Provides high-precision, multi-parameter energy monitoring.
 - Supports remote operation, alarms, and integration with smart energy systems.
- In summary, ADW series distribution box meters offer a modern, modular, and space-efficient solution for multi-circuit energy monitoring, combining advanced metering, communication, and control capabilities in a compact form suitable for residential, commercial, and industrial applications .
