

Door-to-door transport optical line terminal OSFP

Overview

OSFP (Octal Small Form Factor Pluggable) is a pluggable optical transceiver interface standard that supports eight electrical lanes (Tx/Rx) per module. Each lane can operate up to 100G PAM4, allowing total bandwidths of 400G or 800G depending on configuration. As data centers transition from 400G to 800G interconnects, bandwidth demand, power efficiency, and thermal constraints have forced the industry to look beyond traditional form factors. The OSFP management interface is described in a separate document: “Common Management Interface. Adtran's optical terminals incorporate tunable interfaces, software-defined optics, and flexgrid technology to support a range of services and use cases. InnoLight 800G ZR OSFP product family is designed based on dual polarization quadrature amplitude modulation (DP-16QAM), supporting extended C-band, polarization diversity coherent detection and advanced electronic link equalization. The product supports 800Gbps transmission speeds in an. The OSFP form factor has emerged as the leading solution for next-generation deployments, but timing the transition matters. This guide gives you the complete picture. Designed to support 28G NRZ, 56G PAM4, 112G PAM4, and 224G PAM4.
