

Engineering Measurement Optical Power Meter

Overview

The OPM150 is a precision optical power meter used to measure the optical output power of lasers, LEDs, and other photonic devices.

Key Takeaways

An optical power meter is a test device that measures the strength of light traveling through a fiber optic system. In fiber testing, the result is usually displayed as dBm for absolute optical power or dB for relative loss. Thorlabs' expanding line of optical power and energy meters includes a large selection of sensor heads, single- and dual-channel power and energy meter consoles, power and energy meter interfaces, a wireless power meter with a built-in photodiode sensor, and a fiber optic power meter designed for. Artifex Optical Power Meter OPM150 is a low cost, versatile power monitor for the precise measurement of power, from nW to kW, for use in the lab and for OEM applications. The Unit is USB powered and controlled. Ensuring high-speed power output with a wide dynamic range for high-speed applications! The high speed optical power meter quickly collects and measures the instantaneous currents and noise of optical signals, restoring the details of signal currents, and characterizing the continuous changes of. An optical power meter, often shortened to OPM, is the instrument used for that job.
