

High-density 96-core fiber optic distribution frame

Overview

ODF Fiber Optic Distribution Frame LC/APC-96core for The ODF Fiber Optic Distribution Frame LC/APC-96core offers a dependable, scalable, and space-efficient.

Key Takeaways

A 96-core fiber optic distribution frame (ODF) is a compact, high-density solution for terminating, splicing, and managing up to 96 fiber connections in data centers, telecom rooms, and FTTH networks.

Overview
A 96-core ODF is designed to provide efficient fiber management in environments where space is limited while supporting high-speed, long-distance optical transmission. It integrates fiber termination, splicing, storage, and distribution in a single frame, ensuring organized and reliable network operation. These frames are typically rack-mountable (19-inch standard) and can be installed in central offices, data centers, or server rooms.

Key Features

- **High-Density Capacity:** Supports up to 96 fiber cores, with modular options for 24, 36, 48, 72, or 96 cores, allowing flexible expansion.
- **Fiber Management:** Includes splice trays, fiber guides, and bend-radius protection to reduce installation and maintenance risks.
- **Connector Compatibility:** Often equipped with LC/APC adapters to minimize back reflection and signal loss, suitable for high-speed networks.

- **Durability:** Constructed from high-quality metal with anti-corrosion or powder-coated finishes for long-term reliability .
- **Ease of Installation:** Front-access design, pre-marked ports, and modular trays simplify assembly, patching, and maintenance .
- **Scalability:** Modular design allows additional trays or cassettes to accommodate future network growth .

Applications

- **FTTH (Fiber to the Home):** Efficiently manages subscriber loops and distribution points .
- **Data Centers and Server Rooms:** Optimizes space while providing organized fiber routing .
- **Telecom and Enterprise Networks:** Centralized termination and cross-connect for backbone and high-bandwidth deployments .
- **CATV and LAN/WAN Networks:** Supports structured cabling and high-density fiber connections .

Installation Considerations

- **Rack Mounting:** Most 96-core ODFs are designed for 19-inch racks, with 4U height being common for balancing density and accessibility .
- **Fiber Routing:** Ensure proper bend-radius protection (≥ 30 mm) to prevent signal degradation .
- **Future Expansion:** Choose modular ODFs with extra tray slots to accommodate additional fibers without replacing the frame .
- **Environmental Protection:** Indoor-rated units often include dust and fire resistance for safe operation in telecom rooms or data centers .

Summary

A high-density 96-core ODF provides a reliable, scalable, and space-efficient solution for modern optical networks. Its combination of modular design, robust construction, and organized fiber management makes it ideal for high-bandwidth applications, FTTH deployments, and centralized network termination points, ensuring long-term network stability and ease of maintenance .
