

How many telecommunications towers are there in Estonia

Overview

Our network includes 22 masts and towers, some reaching up to 349 meters, ensuring extensive network coverage and optimal conditions for long-distance visibility. Tele2 has announced a significant move in the Baltic telecom market. The Swedish telecommunications group is spinning off its Baltic tower assets to form a joint venture with Global Communications Infrastructure (GCI). The partnership will oversee 2,700 telecom tower sites across Estonia, Latvia. There were more than half a million telecom tower sites across Europe in 2024. Around 80,000 of these were located in Germany, the most of any country. Explore the map and sample data below. The sector was more available to other companies by January 2001 when Elion's monopoly over Estonian telecommunication ended and the market opened to foreign investments.
