

How much does a copper grounding strip for a network server rack cost

Overview

Grounding busbars are rigid bars that connect multiple earthing conductors in a server rack or electrical panel enclosure.

Key Takeaways

Copper grounding strips for server racks typically cost between \$30 and \$100, depending on size, brand, and included accessories.

Copper grounding strips, also called bus bars, are used to provide a dedicated grounding path for rack-mounted equipment, ensuring safety and reducing electrical interference. For example, a 19-inch copper bus bar kit with a 4-foot grounding cable and mounting hardware is available on Amazon, generally priced around \$30-\$50 depending on the seller and shipping options . Larger or specialized bars, such as the Tripp Lite SRGROUND25 for 24U or 25U racks, are designed for heavy-duty data center use and may cost closer to \$80-\$100 .

Factors Affecting Price

- Size and length: Longer bars or full-height strips for tall racks cost more.
- Included accessories: Kits with grounding cables, screws, and mounting hardware are more expensive than bare copper strips.
- Brand and certification: UL-listed or high-quality brands like Tripp Lite or Great Lakes may carry a premium.

- Rack compatibility: Some bars are designed for specific rack heights (e.g., 24U, 25U, 42U), which can influence cost.

Additional Options

- Grounding kits: Complete kits may include multiple bus bars, jumper cables, and bonding straps, ranging from \$50 to \$150 depending on the number of components and rack size .
- Isolated or tin-plated bars: These provide additional protection against corrosion and may slightly increase the price. In summary, for a standard network server rack, you can expect to pay \$30-\$100 for a copper grounding strip, with larger or more comprehensive kits costing more. Always check that the product meets your rack size and grounding requirements before purchase.
