

How much does a fiber optic splice terminal box cost

Overview

Explore a wide range of our Fiber Splice Box selection. Find top brands, exclusive offers, and unbeatable prices on eBay.

Key Takeaways

Fiber optic splice terminal boxes typically cost between \$20 and \$200, depending on capacity, features, and environmental rating. Price Range

- Small indoor boxes (12–24 splices): Around \$20–\$50. These are suitable for residential or small business setups and often wall-mounted with basic splice trays .
- Medium capacity boxes (48–96 splices): Approximately \$50–\$120. These are used in larger commercial networks or multi-dwelling units and may include multiple splice trays and better fiber management features .
- High-capacity or outdoor-rated boxes (up to 144 splices or more): Can range from \$120–\$200+. These enclosures are weather-resistant, IP65-rated, and designed for outdoor use, protecting fibers from moisture, dust, and temperature fluctuations .

Factors Affecting Cost

- Capacity: Higher splice capacity increases the price due to more trays and space for fiber management.
- Material and durability: Outdoor-rated boxes use UV-resistant plastics or metal, which adds to cost.

- Features: Some boxes include integrated PLC splitters, multiple cable inlets, or advanced bend-radius management, which can increase price .

- Fiber type compatibility: Single-mode or multi-mode compatibility may slightly affect cost, though most boxes support both types .

Buying Options

- Online retailers: Amazon and eBay offer a wide range of fiber splice boxes with prices starting as low as \$20 for small indoor models .

- Specialized suppliers: Companies like FiberOptic Supply provide detailed specifications and higher-end enclosures suitable for professional installations . In summary, for a typical residential or small business installation, expect to pay \$20-\$50, while larger or outdoor installations may require \$100-\$200+ per splice terminal box, depending on capacity and features.
