

Lightweight Cable Tray Construction in Australia

Overview

EzyStrut is Australia's market leading supplier for cable support systems, offering cable ladder, tray, mesh and duct solutions.

Key Takeaways

Lightweight cable trays in Australia are available in aluminium, perforated steel, and PVC, offering easy installation, ventilation, and compliance with Australian standards.

Types and Materials

Aluminium Cable Trays: Aluminium trays are lightweight, corrosion-resistant, and suitable for both indoor and outdoor installations. They provide a durable solution for commercial and industrial projects while being easier to handle than steel trays .

Perforated Steel Trays: These trays feature holes for airflow, reducing heat buildup around cables. They are ideal for light-duty applications where ventilation and quick installation are priorities .

Plastic/PVC Trays: PVC trays are extremely lightweight, cost-effective, and easy to cut to custom lengths on-site. They are suitable for smaller installations or where metal trays are unnecessary .

Benefits of Lightweight Cable Trays

- **Easy Installation:** Lightweight trays reduce labor effort and installation time compared to heavy-duty steel trays .

- **Cable Protection:** They shield cables from physical damage, moisture, and environmental factors .
- **Improved Airflow:** Open or perforated designs enhance cooling and prevent overheating .
- **Flexibility:** Lightweight trays allow easy modifications or additions to cabling systems over time .

Suppliers in Australia

- **EzyStrut:** Offers aluminium, pre-galvanised, and hot-dip galvanised trays, including customised solutions for high-volume or fire-rated applications .
- **RS Australia:** Provides aluminium, stainless steel, and galvanised steel trays, including cable baskets and kits for commercial and industrial use .
- **Ozstrut:** Supplies perforated, T3, and T5 trays, with lightweight options suitable for fast installation and compliance with Australian standards .
- **ACURA Group:** Offers perforated and hot-dip galvanised trays for lightweight and outdoor applications, with fire-rated options available .
- **Penn Elcom:** Specialises in PVC plastic trays that are lightweight, easy to cut, and ideal for custom installations .

Considerations for Selection

When choosing lightweight cable trays, consider:

- **Load Capacity:** Ensure the tray supports the weight of your cables. Perforated or PVC trays are suitable for lighter loads .
- **Environment:** Aluminium or stainless steel is preferred for outdoor or corrosive environments .
- **Fire Rating:** For compliance in commercial projects, fire-rated trays may be required .
- **Ease of Modification:** Lightweight trays allow easier future upgrades or cable additions .

Lightweight cable trays in Australia provide a versatile, efficient, and cost-effective solution for cable management across commercial, industrial, and residential projects.
