

MPO Fiber Optic Patch Cord 24 Cores

Overview

24 Fibers MTP / MPO Fiber Optic Patch Cables With twenty-four fibers in a single connector it provides additional density versus three MPO-8 connectors Fiber.

Key Takeaways

A 24-core MPO fiber optic patch cord is a high-density cable assembly that consolidates 24 optical fibers into a single MPO connector, enabling efficient, high-speed network connections in data centers and enterprise networks.

A 24-core MPO (Multi-Fiber Push-On) patch cord is designed to carry 24 individual optical fibers within a single rectangular connector ferrule, significantly reducing cable bulk and installation complexity compared to traditional LC or SC patch cords (MPO can house 8, 12, 16, 24, or more fibers). These cords are pre-terminated and factory-tested for low insertion loss and high return loss, ensuring reliable optical transmission.

Fiber Types

24-core MPO patch cords are available in:

- Singlemode (SM): Optimized for long-distance, high-bandwidth applications.
- Multimode (MM): Commonly OM3 or OM4, suitable for high-speed data center links like 40G, 100G, and 400G Ethernet. The choice of fiber type depends on the network distance, bandwidth requirements, and transceiver compatibility.

Polarity and Connector Configuration

MPO patch cords use polarity types A, B, or C to ensure correct bi-directional signal alignment . Connector options include:

- Male (pinned) or Female (unpinned)
- MPO-to-MPO or MPO-to-LC/SC configurations for integration with cassettes or transceivers . Correct polarity and connector gender are critical to prevent link failures during deployment .

Applications

24-core MPO patch cords are widely used in:

- Data centers: Backbone cabling for 40G, 100G, 200G, and 400G Ethernet .
- 5G networks: High-density fronthaul and backhaul connections.
- Enterprise and campus networks: Reducing rack congestion and simplifying structured cabling.
- FTTH (Fiber to the Home): Rapid deployment using MPO-based splitters and cassettes .

Performance and Installation

- Low-loss design: Typically ≤ 0.35 dB insertion loss for multimode OM4 cords .
- Flexible and flame-resistant jacket: OFNR-rated for riser applications, suitable for multi-floor installations .
- Plug-and-play deployment: Pre-terminated cords reduce installation time by up to 70% compared to individual fiber terminations .
- Temperature range: Usually -20°C to 70°C (-4°F to 158°F) .

Key Considerations

When selecting a 24-core MPO patch cord, ensure:

- Correct fiber type (SM or MM) for your application.
- Proper polarity and connector gender to match existing infrastructure.
- Compliance with standards (IEC 61754-7 for MPO connectors).
- Compatibility with MTP® connectors if enhanced performance is required . This combination of high fiber density, low loss, and flexible deployment makes 24-core MPO patch cords ideal for modern high-speed, high-density optical networks.
