

Outdoor waterproof with distribution box

Overview

Get free shipping on qualified Weatherproof Boxes products or Buy Online Pick Up in Store today in the Electrical Department.

Key Takeaways

A waterproof distribution box for outdoor use should have an IP65 or higher rating, UV-resistant housing, and durable construction to protect electrical components from water, dust, and environmental exposure. Key Features

Ingress Protection (IP Rating): Look for boxes rated IP65–IP68, which ensure protection against dust and water jets, and in some cases, temporary immersion in water, making them suitable for outdoor environments . **Material:** Common materials include ABS, polycarbonate (PC), and PA66, which are impact-resistant, UV-stabilized, and fire-resistant, ensuring long-term durability outdoors . **Mounting and Internal Layout:** Many boxes come with DIN rails for easy installation of miniature circuit breakers (MCBs) and organized wiring. Some models offer compact or larger internal space depending on the number of circuits or terminals required . **Transparent Covers:** Some outdoor boxes feature transparent lids with silicone seals, allowing visual inspection of breakers without opening the box, while maintaining waterproof protection . **Applications:** Suitable for residential, commercial, and industrial outdoor installations, including lighting, pumps, solar PV systems, AC/DC distribution, and junction boxes in exposed environments . **Customization:** Certain manufacturers provide custom sizing, knockouts, and pre-assembled solutions for specific project requirements, including high-exposure areas like rooftops, construction sites, or marine environments .

Recommended Considerations

- **UV Resistance:** Ensure the housing is UV-stabilized for sun-exposed installations.
- **Sealing Reliability:** Check for compression gaskets or double-sealed lids to maintain waterproofing after repeated openings.
- **Compliance:** Verify compliance with IEC 60529 and relevant safety standards for outdoor electrical enclosures.
- **Capacity:** Choose a box size that accommodates your current and future circuit needs, including space for additional terminals or breakers.

Examples

- **SinoBreaker AT and HT Series:** Compact or larger enclosures with IP65–IP68 protection, suitable for DIN rail mounting and outdoor use .
 - **XINYIELE Waterproof Distribution Box:** IP65-rated, ABS plastic, transparent cover, double-sealed silicone design, suitable for AC/DC breakers and outdoor installations .
 - **SELHOT IP65/IP66 Series:** UV-resistant PC/ABS enclosures, suitable for solar PV, MCBs, and high-exposure outdoor environments, with customization options .
- Selecting a high-quality waterproof distribution box ensures safe, reliable, and long-lasting protection for outdoor electrical systems, preventing water ingress, dust contamination, and UV damage while supporting organized wiring and easy maintenance.
