

Small optical modules

Overview

Mini SFF (Small Form Factor) transceivers offer a compact, reliable solution for high-density optical networking. These space-efficient modules support various data rates and standards, making them ideal for telecom infrastructure, enterprise networks, and edge deployments. Integrated circuits and reference designs help you create a smaller and faster optical module design used in high-bandwidth data communication applications. Whether you are creating a 100-Gbps or 400-Gbps, small form-factor pluggable (SFP) module, SFP+ transceiver, XFP module, CFP, X2/XENPAK module. SFP (Small Form-factor Pluggable) is a compact, hot-pluggable network interface module used to connect network devices (switches, routers, firewalls) to fiber optic or copper cables. This modular. An optical module is one of the core components of fiber-optic communication where its transmitting end converts the electrical signal to an optical signal and the receiving end converts the optical signal back to an electrical signal.
