

The power monitoring system indicates a communication circuit failure

Overview

The power component is not powered on. After communication is restored, the device will recover upon receiving a scheduling command. To maintain these systems in optimal working. The panel notifies you, with the yellow/orange triangle on the keypad that a trouble condition exists. On the DSC Power Series (2032/2064/2128) you have a trouble condition command that helps installers to troubleshoot the. These alerts reveal wiring faults, low batteries, ground issues, disabled zones, communication failures, or device malfunctions. However, more often than not, a comm fault 1 on a Honeywell system, while requiring immediate attention, points to a specific type of communication issue rather than a complete system breakdown. After communication. A Communication Failure signal indicates the fire alarm control panel has an active trouble that prevents transmission of fire/intrusion signals to the central station receiver via phone line, thus indicating the system is vulnerable in event of an alarm requiring dispatch of agencies.
