

Welding Technology for Explosion-proof Distribution Boxes

Overview

Expert guidance on specifying, installing, and maintaining explosion-proof distribution box solutions for hazardous areas.

Key Takeaways

The technical scheme includes that the welding process of the explosion-proof junction box is characterized by comprising the following steps: step 1: firstly, assembling a bottom plate, a flange and a group of side plates through a tool clamp, and then fixing through spot. The technical scheme includes that the welding process of the explosion-proof junction box is characterized by comprising the following steps: step 1: firstly, assembling a bottom plate, a flange and a group of side plates through a tool clamp, and then fixing through spot. The invention discloses a welding process of an explosion-proof junction box. These sturdy solutions are certified according to global standards such as ATEX, IECEx. Steel plate explosion-proof distribution box is assembled according to electrical wiring requirements switchgear, measuring instruments, protective appliances and auxiliary equipment in a closed or semi-enclosed metal cabinet or screen, constitute a low-voltage distribution device. During normal. It is widely used in flammable and explosive gas environment such as oil exploitation, refining, chemical industry, offshore oil platform, oil tanker, etc. ♦ Enclosure of the explosion-proof illumination distribution panels treated with anti-static coating and all fasteners are.
