Key Takeaways

Purpose-built Fiber Optic Cutters, part of the broader category of Fiber Optic Tools, give you clean, repeatable cuts on jackets, strength members, and buffer tubes—so your workflow stays fast, tidy, and predictable. Regular scissors, snips, side cutters, flush cutters, and any other tool you might think sufficient for the task will simply not cut aramid yarn cleanly (usually not at all) which results in frustration, and maybe a stopped installation if you happen to be installing bulk fiber optical cable. This. All three models allow for the precise cutting of large-diameter optical fibers, which are commonly used in applications such as laser systems, medical devices, and sensors. Read more. Sumitomo Electric presents the new FC-6+ series of table saws, which will be launched globally in the fourth. 2 Pieces— 2-piece kits include a wire cutter with high-carbon stainless steel blades that are strong enough to cut through optic fibers, wire insulation, and cable ties. They also include a wire stripper that has three openings for stripping different thicknesses of fiber-optic cable jackets down.
