

What should be used to cover the distribution box

Overview

Shop durable circuit breaker box covers to protect and organize your electrical panels and distribution boxes.

Key Takeaways

A distribution box should be covered with a proper, code-compliant enclosure made of durable materials like polycarbonate, ASA, or epoxy-coated steel, ensuring safety, accessibility, and protection from environmental hazards. Safety and Code Compliance

The cover of a distribution box must prevent accidental contact with live wires, protect against dust, moisture, and physical damage, and comply with electrical codes such as the NEC . For active boxes, the cover must remain easily removable to allow immediate access for maintenance or emergencies . Outdoor boxes require weatherproof covers with appropriate IP or NEMA ratings to prevent water ingress and corrosion .

Material Selection

Common materials for distribution box covers include:

- Engineering thermoplastics like Polycarbonate (PC) or Acrylonitrile Styrene Acrylate (ASA), which are lightweight, durable, and resistant to impact .

- Epoxy-coated or powder-coated stainless steel, offering high strength and corrosion resistance, suitable for industrial or outdoor environments .

Types of Covers

- Blank covers: Used for inactive or abandoned boxes to seal the enclosure safely .
- Switch or outlet covers: For boxes containing switches or outlets, available in plastic or metal .
- Weatherproof covers: For outdoor installations, providing protection against rain, snow, and UV exposure .
- Decorative or hinged covers: For indoor areas, lightweight panels, hinged artwork, or sliding panels can conceal the box while maintaining required clearance for safety .

Installation Considerations

- Ensure the box is properly grounded and wires are neatly arranged inside before covering .
- Maintain the required working space in front of the box (typically 36 inches deep and 30 inches wide) for safe access .
- Use screws or fasteners appropriate for the cover material, avoiding overtightening .
- For abandoned boxes, if local codes allow, the box can be permanently sealed with drywall or repurposed as a decorative niche, provided all wiring is removed . By selecting the correct cover type and material, and following safety and code requirements, a distribution box can be safely protected while maintaining accessibility and aesthetic integration into the space.
